

An artistic illustration of a supermassive black hole. The central black hole is surrounded by a glowing, multi-colored accretion disk that transitions from yellow and orange near the center to red and dark orange towards the edges. A bright, vertical jet of light extends upwards from the center of the black hole. The background is a dark, starry space.

**Supermassive black holes
can have the mass of
many millions of suns!**

Illustration

Perhaps they should be called
“Super-dupermassive” instead.
